General Details:

Intraoral Imaging System

The Intraoral imaging system is the ideal veterinary digital imaging solution. It delivers superior diagnostic images essential for successful diagnosis and endodontic treatment. Featuring unparalleled durability, image quality and easy to use EzSensor software, increased workflow efficiency and diagnostic accuracy are achieved at a low cost of ownership.

MyVet user-friendly dental software quickly acquires, processes, and manages high quality, diagnostic images. Real-time digital imaging drastically shortens treatment time by eliminating the need to process and develop film.

- DICOM-compliant system
- Easy integration into the existing clinical network
- Real-time viewing of high quality images
- Fully integrated solution

Do You Already Have A Generator?

Package Without Generator \$6,995
